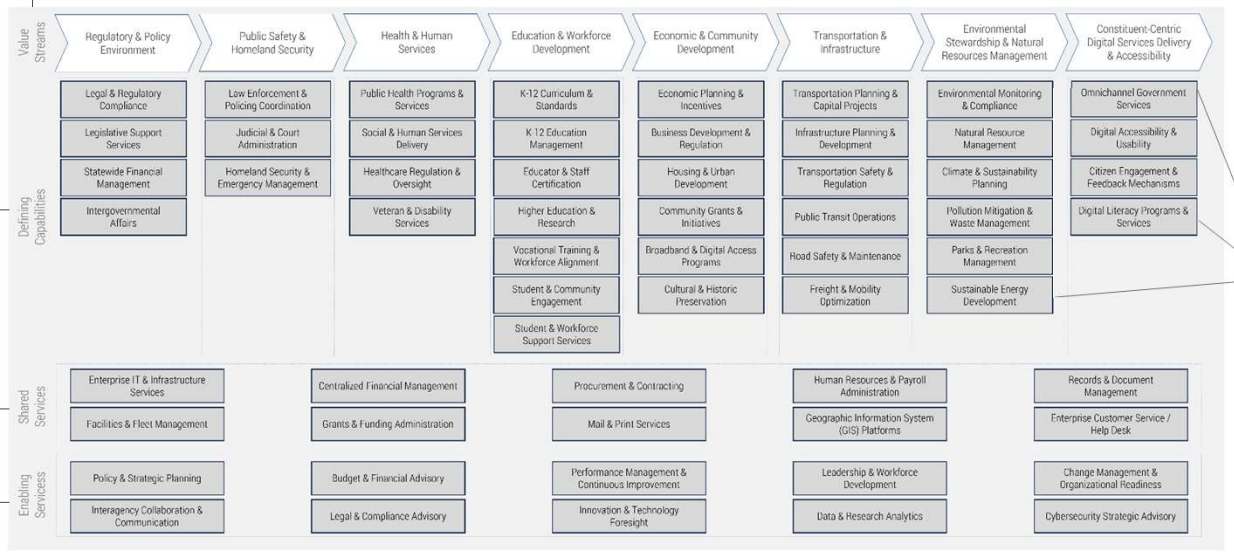

Mapping state government capabilities: How to read a capability map: Level 1

Each capability map in this blueprint follows the same format.

1 **Value Streams + Level 1 Capabilities**

Value Streams

In a state government context, value streams are a high-level, end-to-end sequence of activities that are performed to deliver a specific outcome or value to its stakeholders and constituents.

Defining (Core) Capabilities

Defining capabilities depict core functions of government systems.

Shared Capabilities

Shared capabilities typically focus on operational services support.

Enabling Capabilities

Enabling capabilities focus on strategic, policy, and governance services support.

* Shared and enabling capabilities support defining capabilities.

Level 1 Capabilities

Gray boxes depict Level 1 capabilities, which are fundamental business functions representing a major operational area, capturing the primary competencies necessary to achieve strategic or value stream objectives.

LEGEND

Value Stream

Level 1 Capability

A business reference architecture decomposes the business operations of a state government into distinct value streams. Each value stream includes Level 1 and Level 2 business capabilities required for execution, along with shared and enabling capabilities that support all value streams.

Mapping state government capabilities: How to read a capability map: Level 2

Each capability map in this blueprint follows the same format.

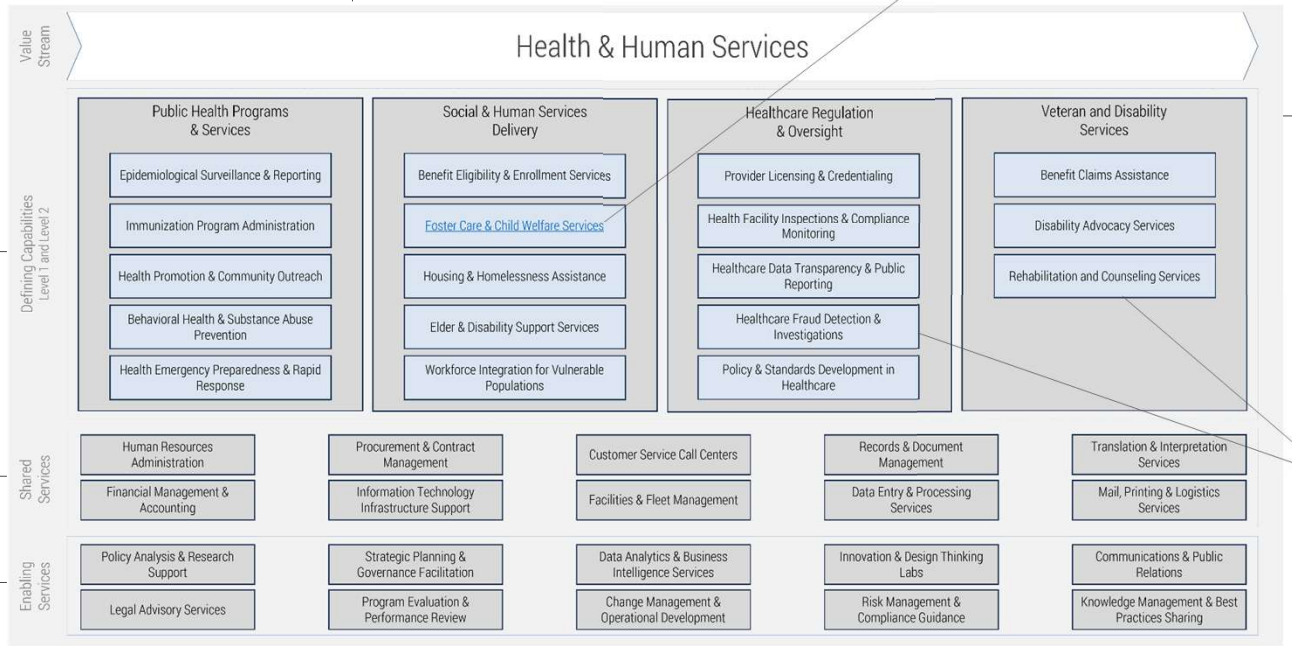

2 **Value Streams + Level 1 + Level 2 Capabilities**

Value Stream

An activity that delivers a specific outcome or value to stakeholders and constituents.

Defining (Core) Capabilities: L1 + L2

This area identifies Level 1 and Level 2 capabilities.

Shared Capabilities

This area identifies shared capabilities that support defining capabilities.

Enabling Capabilities

This area identifies enabling capabilities that support defining capabilities.

Level 1 Capabilities

This area depicts Level 1 capabilities, which are fundamental business functions representing a major operational area, capturing the primary competencies necessary to achieve strategic or value stream objectives.

Level 2 Capabilities

Blue boxes depict Level 2 capabilities, which are subordinate services within a Level 1 capability, defining specialized processes or services that fulfill broader operational and strategic functions.

Step 1.1.1 Define your organization's value streams

The **Regulatory & Policy Environment** value stream supports the administrative and operational backbone of government to deliver services, uphold laws, and ensure accountability.

The **Health & Human Services** value stream delivers healthcare access, public health initiatives, and social support programs to enhance wellbeing, protect vulnerable populations, and ensure equitable health outcomes across the state.

The **Economic & Community Development** value stream advances business growth, housing programs, and community revitalization initiatives, fostering sustainable economic opportunities and vibrant local communities.

The **Environmental Stewardship & Natural Resource Management** value stream safeguards air, water, and natural habitats through conservation programs, responsible resource use, and policy-driven solutions to protect ecosystems and biodiversity.

The **Public Safety & Homeland Security** value stream focuses on preserving public safety, maintaining law and order, and safeguarding communities through coordinated law enforcement, homeland security measures, and emergency management operations.

The **Education & Workforce Development** value stream provides high-quality K-12, post-secondary, and workforce training opportunities, preparing individuals with the skills, knowledge, and resources needed to succeed in a dynamic economy.

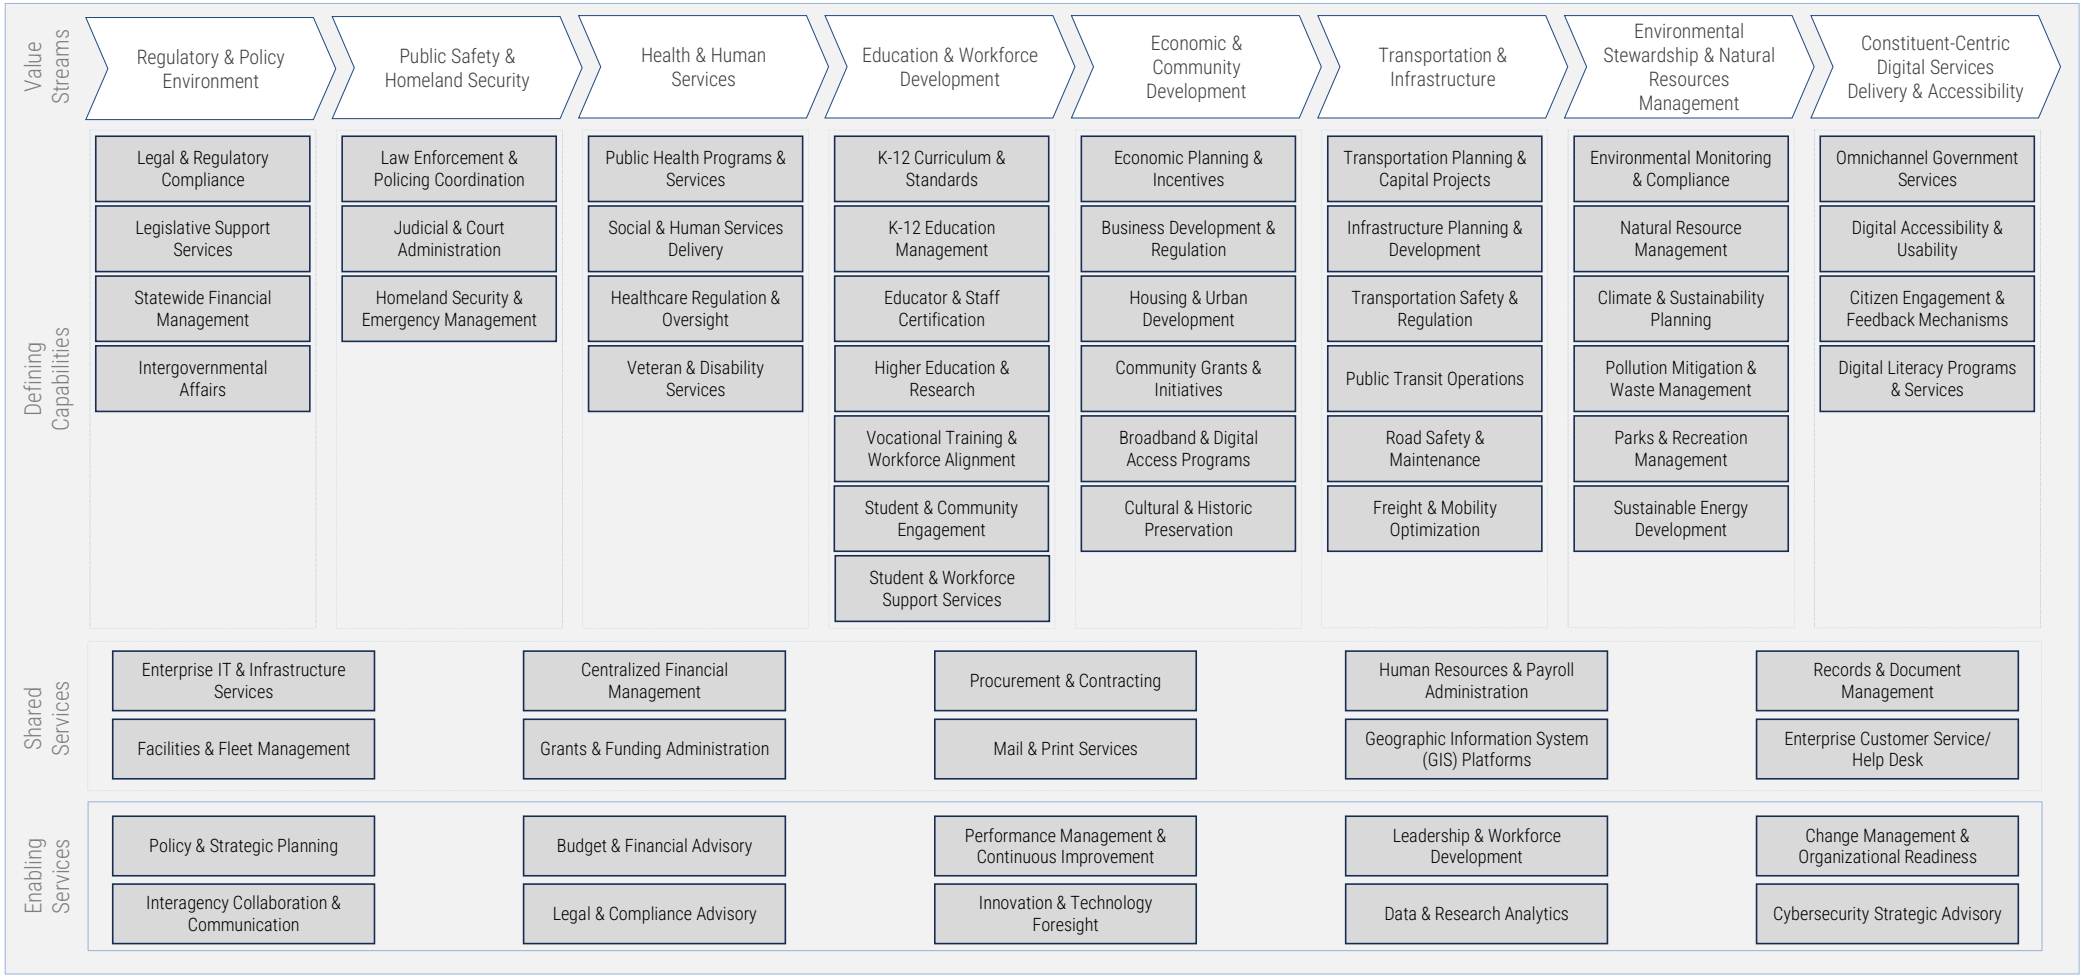

The **Transportation & Infrastructure** value stream plans, builds, and maintains essential physical infrastructure – roads, public transit, bridges – to enable safe, efficient movement of people and goods statewide.

The **Citizen-Centric Digital Service Delivery & Accessibility** value stream enhances the user experience for online government services, emphasizing accessibility, user-friendly design, and digital engagement across the diverse populations state governments serve.

For illustrative purposes only. Not an exhaustive list of capabilities.

Step 2.1 – Define Your Organization's Key Capabilities

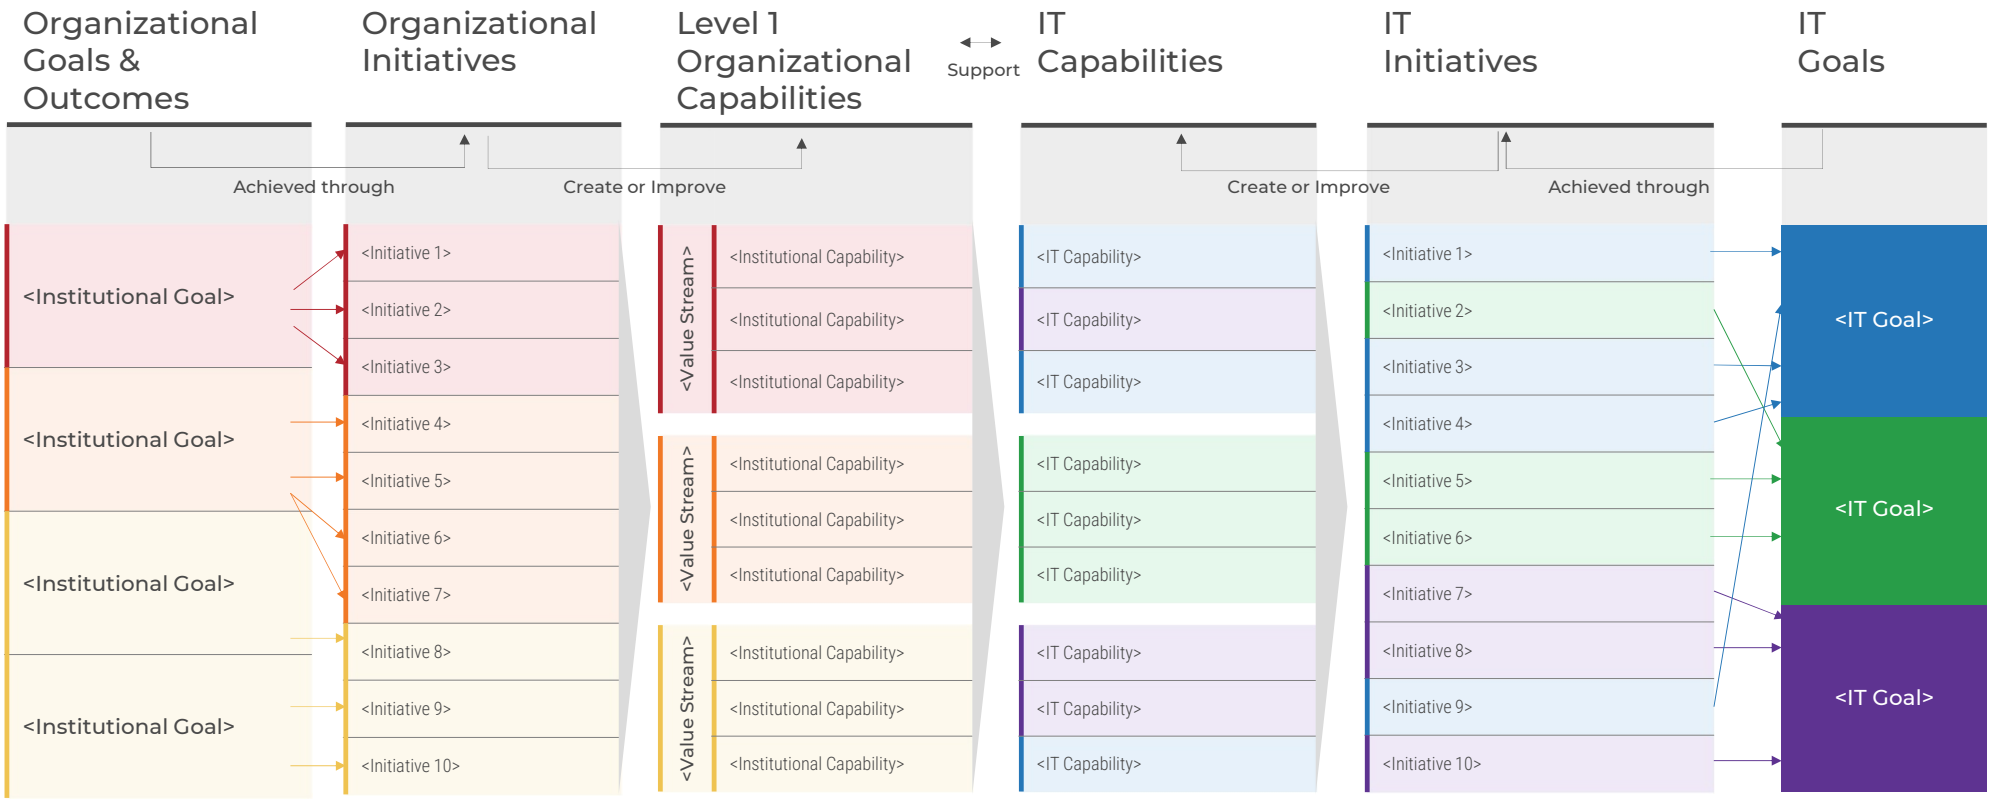

Level 1 Capabilities

© INFO-TECH RESEARCH GROUP

For illustrative purposes only. Neither an exhaustive list of value streams nor capabilities.

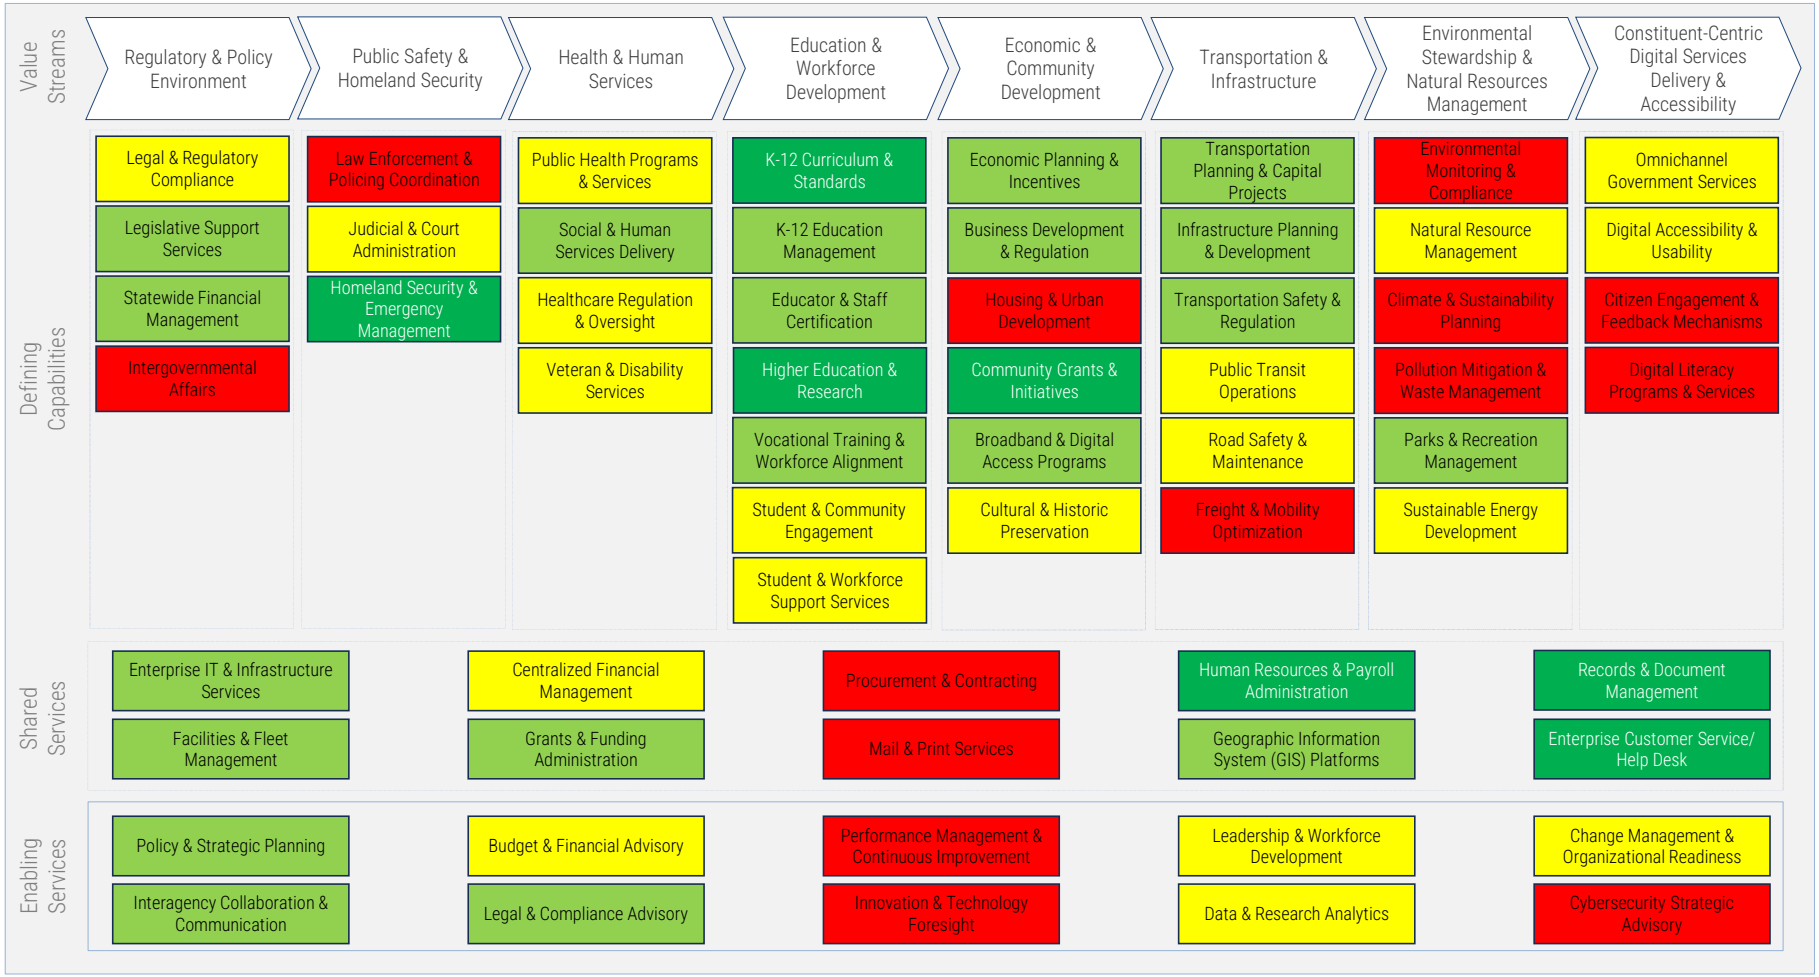

Step 2.2 – Develop a strategy map

For illustrative purposes only.

Step 3.1 – Organizational process review of key capabilities

Level 1 Capabilities

Legend

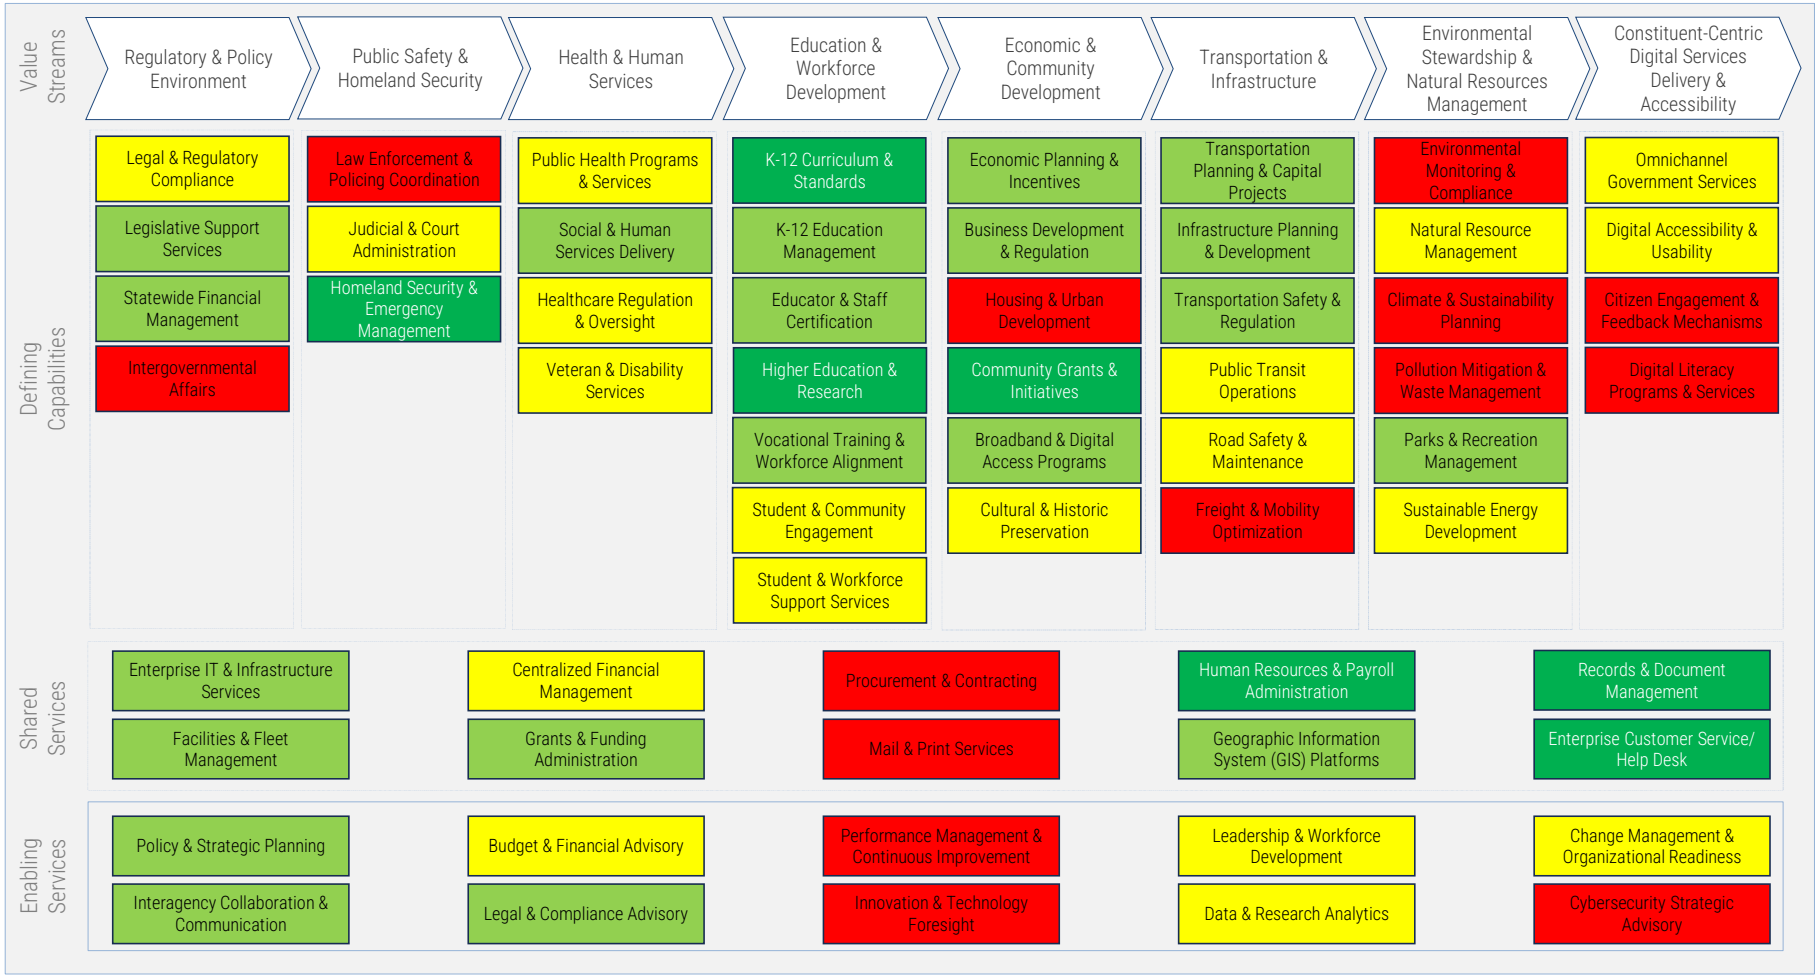

- **NONE:** No documented process exists.
- **LOW:** Processes have been documented but have not been effectively communicated and may be in conflict.
- **MEDIUM:** LOW+ processes are explicitly defined and have been formally communicated. There is minimal overlap between processes.
- **HIGH:** MEDIUM+ processes are enforced and regularly monitored for deviations. Employees typically adhere to the processes.

For illustrative purposes only. Neither an exhaustive list of value streams nor capabilities.

Step 3.2 – Organizational information assessment of key capabilities

Level 1 Capabilities

Legend

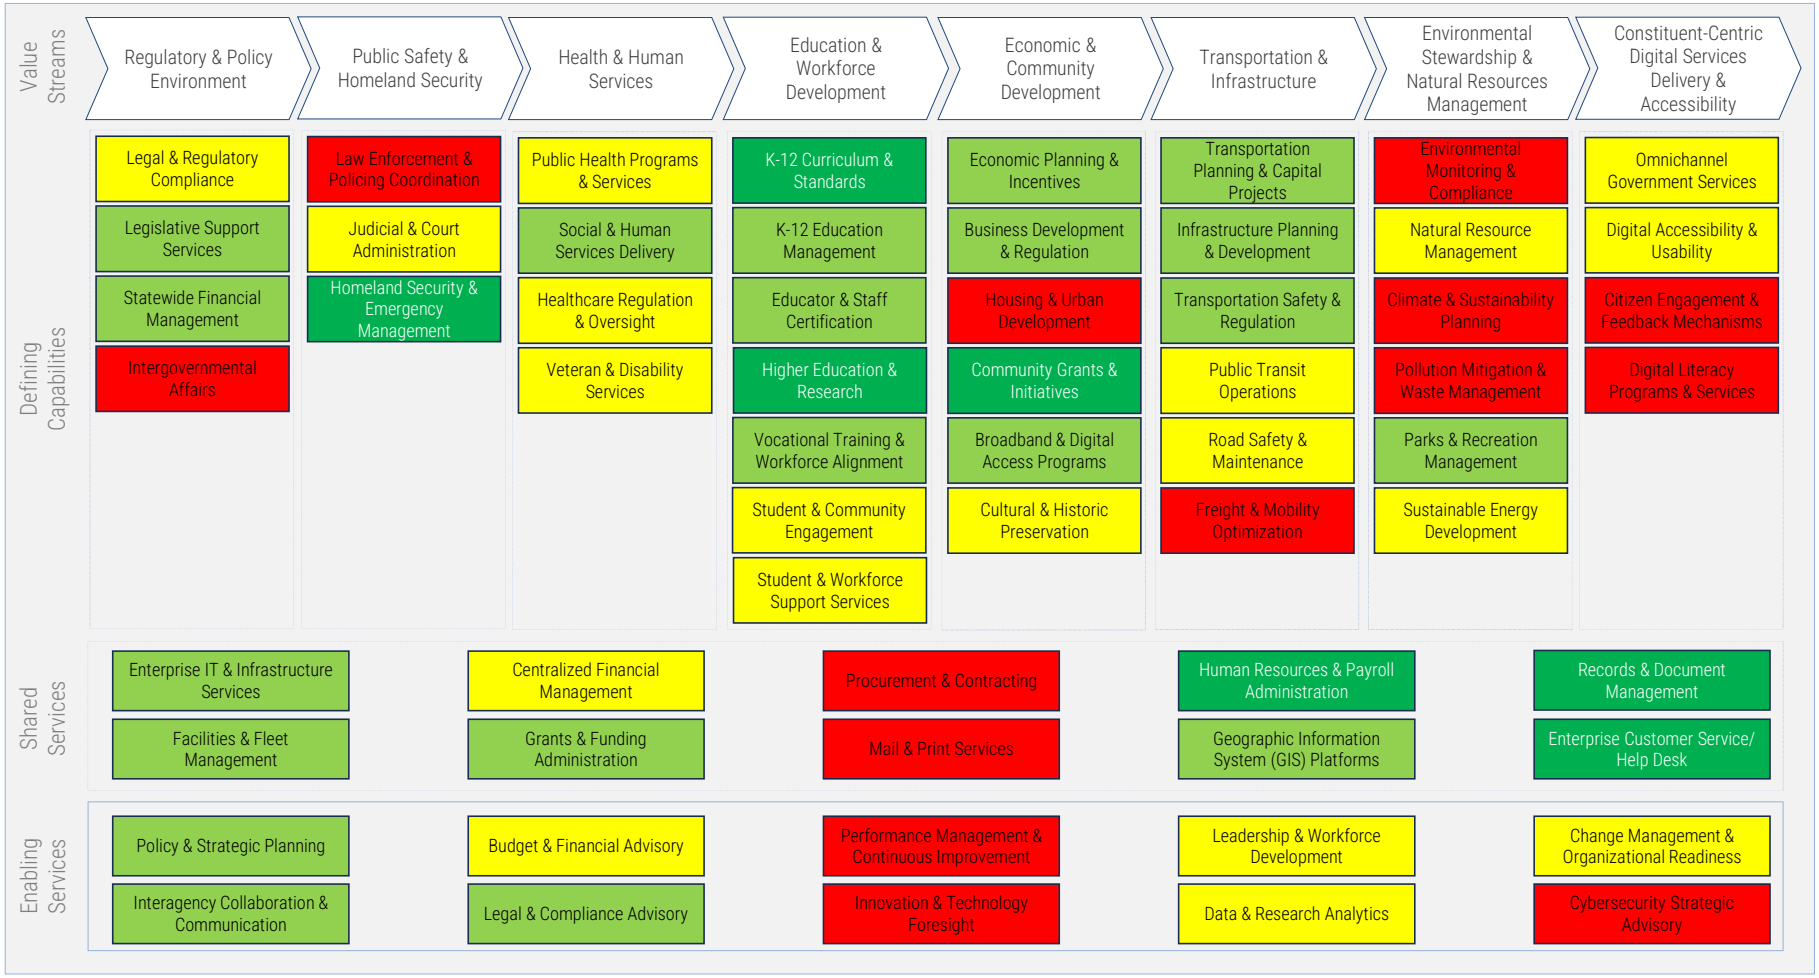

- **NONE:** Data is unavailable, unreliable, or duplicated, or has insufficient details.
- **LOW:** Data is available but not subject to adequate integrity or quality controls. Data ownership is undefined.
- **MEDIUM:** LOW+ data is available but not fully automated. Data ownership is mostly defined.
- **HIGH:** MEDIUM+ data is available, high quality, and fully automated with clear ownership.

For illustrative purposes only. Neither an exhaustive list of value streams nor capabilities.

Step 3.3 – Organizational technology opportunity assessment

Level 1 Capabilities

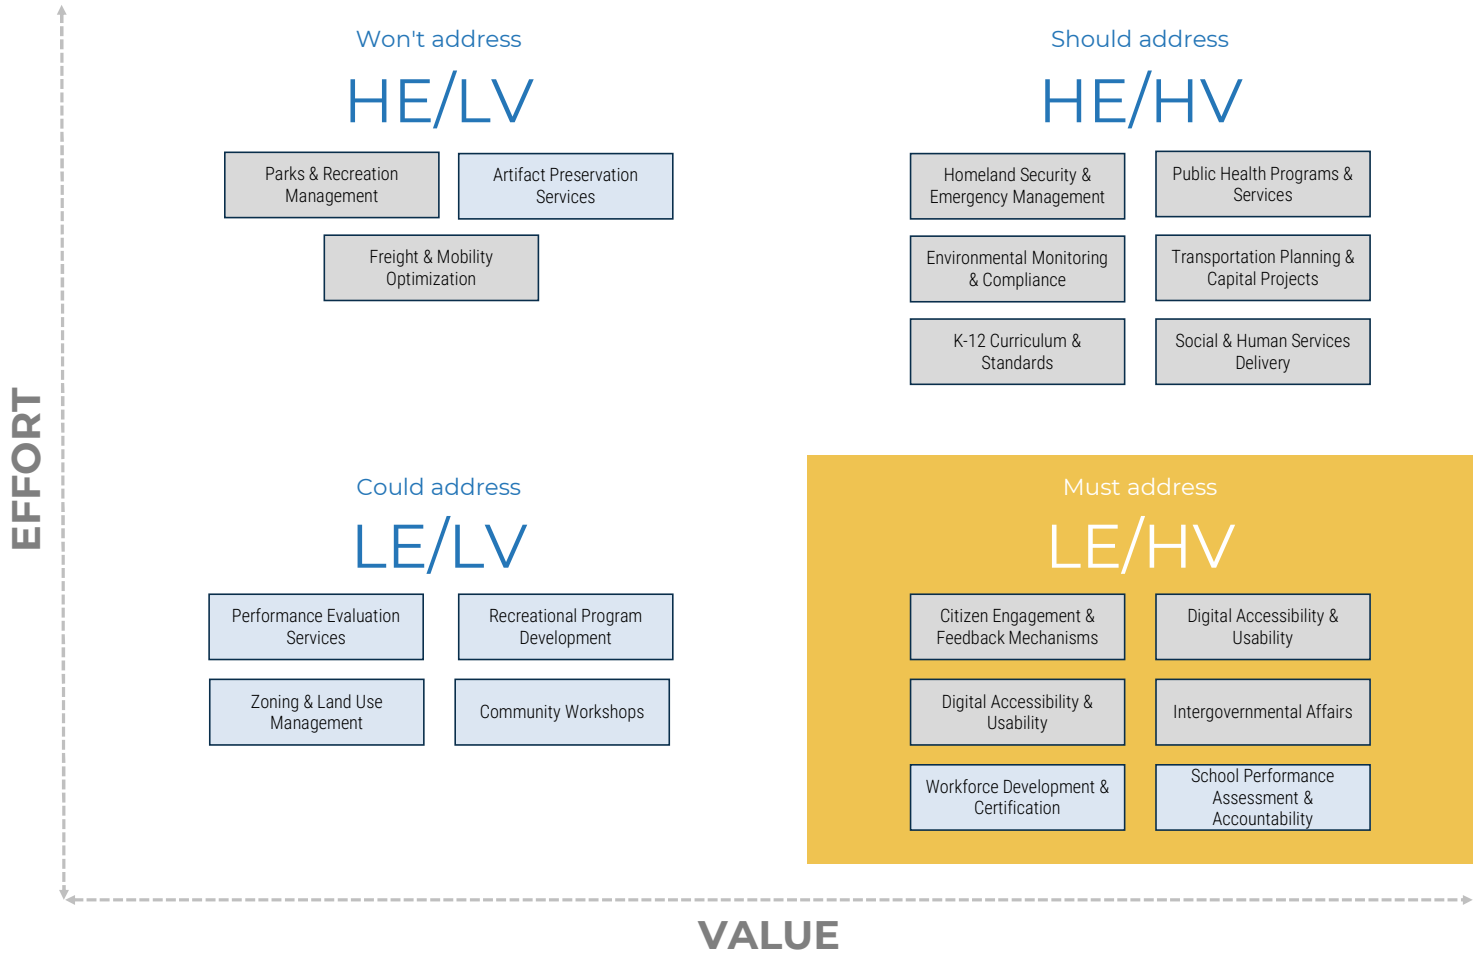

Legend

- **NONE:** Capability is typically unsupported by applications. The likelihood of legacy applications supporting these capabilities is high.
- **LOW:** Capability is somewhat supported by applications or is supported by disparate, poorly integrated applications. There is typically a mix of legacy and purchased applications supporting these capabilities.
- **MEDIUM:** Capability is moderately supported by applications. Organizations do not have to build their own applications, but there are not many solutions to choose from.
- **HIGH:** Capability is well supported by applications. Organizations can choose from a variety of solutions that will meet or exceed their needs.

Step 4.1.1 – MoSCoW analysis for organizational business capabilities

Value to Effort Impact Ratio

- HE = High effort
- LE = Low effort
- HV = High value
- LV = Low value

Note: To edit and customize this illustrative example, please download the corresponding template.

Step 4.1.2 – Create a ranked list of IT implications

MoSCoW Rank	Capability	IT Implication	Value Stream Impacted	Comments/Actions
M	[Capability]	[Implication]	[Value Stream]	[Comments/Actions]
M	[Capability]	[Implication]	[Value Stream]	[Comments/Actions]
M	[Capability]	[Implication]	[Value Stream]	[Comments/Actions]
S	[Capability]	[Implication]	[Value Stream]	[Comments/Actions]
S	[Capability]	[Implication]	[Value Stream]	[Comments/Actions]
S	[Capability]	[Implication]	[Value Stream]	[Comments/Actions]
C	[Capability]	[Implication]	[Value Stream]	[Comments/Actions]
C	[Capability]	[Implication]	[Value Stream]	[Comments/Actions]
C	[Capability]	[Implication]	[Value Stream]	[Comments/Actions]
W	[Capability]	[Implication]	[Value Stream]	[Comments/Actions]
W	[Capability]	[Implication]	[Value Stream]	[Comments/Actions]
W	[Capability]	[Implication]	[Value Stream]	[Comments/Actions]
